AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE

FOREWORD

Each year the Nevada State ASC Committee publishes a summary of ASCS farm program activities in Nevada. This summary is published for the benefit of all persons and organizations interested in the advancement of agriculture. Statistical data and narratives contained in this report cover all ASCS farm programs active in Nevada during the 1967 program year.

ASCS farm programs play an important part in maintaining our nation's agricultural heritage. The action farm programs maintain the family farm system, provide increased farm income, and conserve our soil and water resources for generations to come. An appraisal of this report will show the favorable impact the agricultural programs have on Nevada's agricultural enterprise.

The State committee commends the ASC county committeemen who have so effectively administered these ASCS farm programs. The farmer committee system is a unique and integral part of our organization which serves not only the farmer but all the people of our nation. The efficient and courteous service rendered by the county office personnel is recognized and appreciated.

1967 AGRICULTURAL CONSERVATION PROGRAM

The agricultural conservation program encourages farmers and ranchers to carry out needed soil and water conservation practices. Through this voluntary program, the Federal government shares with the farmer the cost of carrying out conservation measures to insure a productive agricultural industry for generations to come.

The conservation practices offered in Nevada's agricultural conservation program were developed by the Soil Conservation Service, U. S. Forest Service, Farmers Home Administration, State Department of Agriculture and the Nevada ASC State Committee. The program offered in each county of this State was developed by the same USDA agencies in the county. The program is flexible so county groups can develop or adopt practices to meet local soil and water conservation problems.

Nevada has a wide variety of farm and ranch operations, all of which benefit from the ACP. The program offers livestock men cost-sharing for range improvement practices such as cross fencing, seeding, or developing water or their livestock. Row crop, hay and grain growers receive assistance on such practices as land leveling, concrete ditch lining, and noxious weed control.

Not only farmers and ranchers benefit from the agricultural conservation program; all of America gains through the conservation of soil and water. Beautification projects with conservation benefits provide scenery which is appealing to the traveler's eye. ACP cost-sharing helps build reservoirs and assists with wildlife conservation practices used by sportsmen and for recreational purposes. This conservation partnership benefits everyone while insuring a prosperous agricultural industry for future generations.

1967 ACP EMERGENCY CONSERVATION MEASURES

The regular Agricultural Conservation Program is supplemented by Public Law 85-58. This law provides assistance to farmers and ranchers for restoration of farmland damaged by flood, fire earthquake, or drought. Cost-sharing, up to 80 per cent of the cost is authorized for applying emergency conservation measures needed to restore the land's productivity.

The only county in Nevada in 1967 to be declared a disaster area and eligible for ACP emergency conservation measures was Clark County. Heavy rains in December 1966, caused flooding of the Virgin River which damaged farm land, destroyed irrigation systems and eroded the stream channel. Practices approved under the emergency program included debris removal, stream channel clearance and realignment, releveling crop land, and restoring irrigation systems.

The Clark County ASC Committee distributed \$85,984 to 24 farmers and ranchers to help defer the costs of the restoration work. In addition, \$5,920 was paid to SCS for technical services bringing the total emergency program assistance to \$91,904.

1967 WOOL INCENTIVE PAYMENT PROGRAM

The National Wool Act of 1954, as amended, provides incentive payments to wool growers to encourage the annual domestic production of 300 million pounds of wool. The Congress of the United States recognizes wool as an essential and strategic commodity not produced in sufficient quantity in our nation.

The rate of payment for wool is the percentage figure required to bring the national average price of wool received by all producers up to the incentive level. The incentive level for 1967 was 66 cents per pound of shorn wool. The national average marketing price for wool was 39.8 cents per pound on a grease basis. The payment rate was 65.8 percent of the average marketing year.

Under the Act a support price is established for unshorn lambs. A payment on unshorn lambs is made to avoid unusual shearing of lambs for slaughter in order to obtain payments for shorn wool. This gives the producer essentially the same net returns that he would have received had he sheared the lambs and obtained a shorn wool payment. The payment rate for unshorn lambs was \$1.05 per cwt. in 1967.

SALES PROMOTION FUND REFERENDUM

In September of 1966 wool producers voted to withhold a portion of their wool payments for promoting the sale and use of wool and lambs. The approval of this agreement authorized the Secretary of Agriculture to withhold 1.5 cents per pound from shorn wool payments and 7.5 cents per cwt. from unshorn lamb payments. Deductions go to the American Sheep Producers Council, Inc. for the advertising and sales promotion of lambs and wool.

The referendum was conducted by ASCS county committeemen. Nation wide, 80 percent of the growers owning 79 percent of the sheep approved the agreement. The agreement will remain in effect through 1969.

PRICE SUPPORT

Operations of the United States Department of Agriculture to stabilize prices and production of certain agricultural commodities are referred to as price support programs. Price support operations are conducted by the Commodity Credit Corporation and activity at the county level is handled by ASC county committees. Price support may be obtained in one of two ways -- loans and purchases or payments.

PRICE SUPPORT LOANS AND PURCHASES

Loans support prices in two major ways: (1) providing farmers with a cash return for the commodity, and (2) strengthening market prices of the commodity through withdrawal of supplies from the market. Price support loans are available to producers for wheat, corn, grain sorghum, barley, oats, honey, and many other commodities not produced in Nevada.

The loan method of support gives the farmer an opportunity either to market his crop or keep it under loan, whichever course is more advantageous. If the market price rises above the loan level, plus charges, he has the privilege of paying off the loan and selling his commodity in the open market. If the price fails to rise above the loan level, however, the nonrecourse character of the loan agreement makes it possible for him to deliver the commodity to Commodity Credit Corporation instead of repaying the loan.

PRICE SUPPORT PAYMENTS

The payment method of support was used for wool, wheat, feed grain and cotton programs. (See section of this report covering these programs.) Through price support payments the increased production of certain agricultural commodities is encouraged as through the wool program. Price support payments, as in the wheat, feed grain and cotton programs, are used to curtail production to eliminate surpluses.

FARM STORAGE FACILITY AND DRYING EQUIPMENT LOANS

Under these programs ASCS encourages and aids farmers in the expansion of facilities needed for farm storage of price supported commodities. Government loans are available to farmers to enable them to construct grain storage bins and obtain drying equipment to effectively utilize these storage facilities.

Loans are authorized up to 85 percent of the net cost. Loans are made at four percent interest and are repayable in four equal annual installments over a period of five years.

In 1967 there was one farm storage loan for \$1,140.00.

1967 BARLEY FARM STORED

1967 HONEY FARM STORED

COUNTY	LOANS (NO.)	QUANTITY (BUSHELS)	AMOUNT (DOLLARS)
CHURCHILL	1	32,400	\$ 4,102
TOTAL	1	32,400	\$ 4,102

1967 UPLAND COTTON PROGRAM

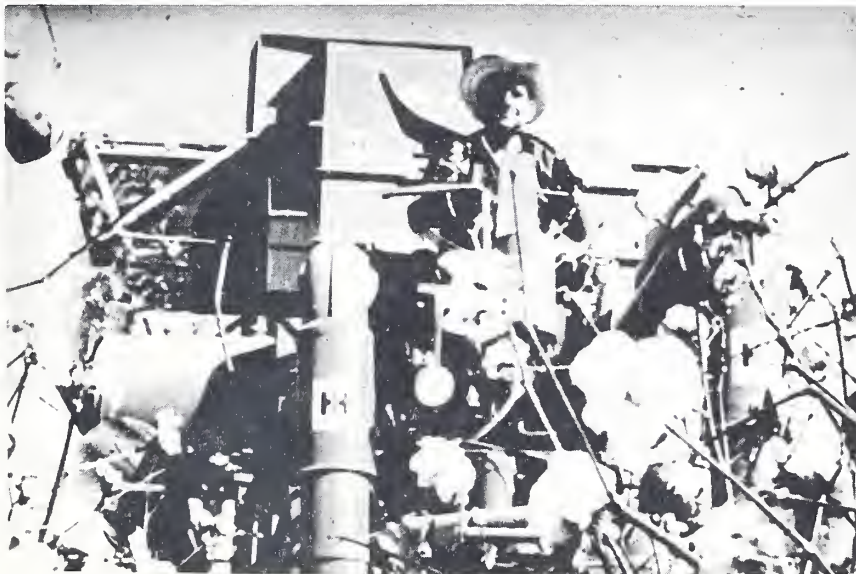

The 1967 Cotton Program remained unchanged in principle and objective from programs in previous years. The program continued efforts to reduce cotton production and keep it competitively priced without decreasing the producer's income.

Acreage Diversion: Participants in the program were required to reduce effective farm allotments by 12.5 percent. No payment was made for this mandatory acreage diversion. Producers, however, could elect to divert to conserving uses additional acreage, up to 35% of their effective allotments, for payment. The diversion payment was based on 10.78 cents per pound times the acreage diverted times the farm yield.

Price Support: Growers taking part in the program also received price-support payments. This payment was 11.53 cents per pound of cotton times the farm yield times the farm domestic allotment. If the acreage planted to cotton was less than 90% of the domestic allotment, the price-support payment was based on actual planted acres. The farm domestic allotment is 65% of the effective farm allotment.

Price-support loans were also available to program participants. Individual loan rates were based on the national average loan rate of 20.25 cents per pound for middling 1-inch cotton at average location.

Clark and Nye Counties are the only counties in Nevada which produce cotton. Cotton producers in Clark County transferred their 1967 cotton allotments by individual leases to producers in Nye County.

COTTON ALLOTMENT DATA

COUNTY	ALLOTMENTS	FARMS	ALLOTMENT ACREAGE TRANSFERRED BETWEEN COUNTIES BY LEASE	EFFECTIVE ALLOTMENTS
CLARK	101	5	-101	0
NYE	3,421	16	* + 27	3,448
TOTAL	3,522	21		3,448

* Adjusted for differences in projected yields.

PARTICIPATING FARMS

COUNTY	FARMS	ALLOTMENTS	ACRES FOR DIVERSION	DIVERSION PAYMENTS	ACRES FOR PRICE- SUPPORT	PRICE- SUPPORT PAYMENTS	TOTAL PAYMENTS
CLARK	0	0	0	0	0	0	0
NYE	15	3,448	1,207	\$115,611	2,241	\$229,676	\$345,287
TOTAL	15	3,448	1,207	\$115,611	2,241	\$229,676	\$345,287

REFERENDUM AND MARKETING QUOTAS

In December of 1966, a referendum was held to determine if cotton farmers favored marketing quotas for the 1967 upland cotton crop. Voting was done by mail and all producers sharing in a 1966 upland cotton crop or its proceeds or having a 1966 cotton allotment were eligible to vote. The results of the referendum were:

COUNTY	ELIGIBLE VOTERS	YES VOTES	NO VOTES	TOTAL VOTES	% YES VOTES
CLARK	7	3	2	5	60 %
NYE	30	21	3	24	87.5%
TOTAL	37	24	5	29	82.8%

Since at least two-thirds of the producers favored marketing quotas, quotas were in effect for the 1967 upland cotton crop. Under the quota program, producers were penalized for cotton acreage planted in excess of their effective farm allotment. In 1967 there were no excess cotton acreage or marketing quota penalties in Nevada.

ALLOTMENT TRANSFER REFERENDUM

In May of 1966 a referendum was held to determine if producers favored permitting "out of county" transfers of cotton allotments by sale or lease. If at least two-thirds of the voters favored transfer, growers were allowed to transfer allotments by sale or lease to farmers in other counties within the same state. Results of the "allotment transfer referendum" in Nevada were:

COUNTY	YES VOTES	NO VOTES	TOTAL VOTES	% YES VOTES
CLARK	2	1	3	66.6%
NYE	3	7	10	30.0%

As a result, allotments could be transferred by sale or lease from Clark to Nye County but not from Nye to Clark County. These provisions will remain in effect through the 1969 program year.

1967 FEED GRAIN PROGRAM

The 1967 Feed Grain Program was designed to maintain feed grain production at levels which would satisfy current needs and provide adequate but not excessive reserves, and improve farm income. In 1967, corn and grain sorghum were the only two feed grains included in the program. Barley, for the first time, was not considered as a feed grain for program purposes.

To take part in the 1967 program, producers were required to divert, to a conserving use, an acreage equal to 20 percent of the farm feed grain base. Producers with bases of 25 acres or less could divert any portion up to the base for payment. On farms with feed grain bases of between 25 acres and 125 acres, producers could elect to have bases temporarily reduced to 25 acres. The entire temporarily reduced base of 25 acres could then be diverted for payment. The diversion payment was based on 50 percent of the price support times the yield times the acres diverted.

Price support payments were made on acreage planted to feed grains which did not exceed the farm base less the acres intended for diversion. The price support payment was computed by multiplying the acres credited for price support by the farm yield by the applicable rate: corn, 30 cents per bushel and grain sorghum, 29.68 cents per bushel.

Price support loans and purchases were available to producers who qualified for price support payments. The rates for Nevada were \$1.15 per bushel for grain sorghum and \$1.54 per bushel for corn.

Farmer cooperation in the feed grain programs has reduced the nations feed grain surpluses to a comfortable level. As a result, farmers can expect an increased income from feed grain production and program costs for feed grain storage has been substantially reduced for the coming year.

TOTAL	21	711	259	\$13,214	140	\$2,980	\$16,202

The above table indicates price support and diversion payments made for corn. No price support or diversion payments were made on grain sorghum.

1967 WHEAT PROGRAM

The wheat program for 1967 underwent substantial changes from programs offered to producers in preceeding years. Farm allotments were increased by approximately 30 percent over the allotments in effect for 1966. No payments were made for diverting acreage from wheat production and the minimum mandatory diversion requirement was removed from the 1967 program. These major program changes resulted from reduced wheat surpluses due to successful cooperation of farmers in previous programs and the continued heavy demands for wheat.

As in the past, the 1967 wheat program was completely voluntary. It offered price support loans, marketing certificates, and substitution between wheat and feed grain. Participants could elect to over plant their allotments by 50%; however, the production had to be stored.

Price support loans of \$1.25 per bushel national average were available to producers for wheat produced within their effective allotments.

Domestic marketing certificates on 35 percent of the projected production of the farm allotment. The certificates for 1967 are valued at \$1.36 per bushel. In 1967 all participants in the wheat program requested and received cash payments for their marketing certificates.

COMPLIANCE

The success of all ASCS farm programs is dependent on participants complying with program regulations and acreage requirements. ASC county committees and office personnel have the responsibility of determining program compliance.

ACP Spot Checks: ASC county committees determine compliance on all conservation practices under the agricultural conservation program for which the Soil Conservation Service was not assigned the technical responsibility. A minimum of 5 percent of these practices must be spot checked by ASCS personnel. ASCS representatives are also responsible for insuring that all ACP conservation practices are maintained in accordance with program policy. Vendors providing conservation materials and services are also subject to spot checks.

Compliance by Certification: The farm certification program was approved in 4 counties during the 1967 program year. Churchill and Pershing Counties were approved for wheat and feed grain; Clark, and Nye Counties were approved for cotton, feed grain and wheat. The responsibility for complying with bases, allotments, and diverted acreage lies with the farmer who is supplied with aerial photo copies of his farm. The farmer has the responsibility of reporting to the county office his acreages and other program compliance provisions. County office personnel spot check 25% of the reporting farms to insure program provisions are met.

Regular Compliance: In counties not approved for the certification program, county office employees completed the compliance work. Visits were made to each farm participating in a program and reporters measured wheat, feed grain, cotton, and diverted acreages.

Aerial Photography: Humboldt, Pershing, Churchill, Lyon and Nye Counties maintain aerial photographs covering cropland in the counties. The photographs are to a scale of 1" - 660' and are used in making accurate acreage determinations. New flights are made approximately every six years to keep county offices up to date on field changes.

Measurement Service: In 1967 measurement service was offered in all Nevada counties. This service includes measuring and staking areas before planting, measurement of land after planting, or measurement for any program the farmer requests. Measurement service assures the participant that program acreage provisions will be met, and eliminates the need for acreage adjustments after planting.

The entire cost of the measurement service is paid for by the producer. Measurement service is very important to producers in counties approved for the farm certification program.
